1. Basis of the product report:
   - APA Custom Product Specification E-720
   - ASTM D5456-14b, ASTM D5456-13, D5456-09 and D5456-05a recognized by the 2018 International Building Code (IBC) and International Residential Code (IRC), 2015 IBC and IRC, 2012 IBC and IRC, and 2009 IBC, respectively
   - APA Test Reports (see Table 2) and other qualification data

2. Product description:
   Structural composite lumber (SCL) defined in this report is any of laminated veneer lumber (LVL), laminated strand lumber (LSL), and oriented strand lumber (OSL). SCL is made with wood strands or veneers of various species oriented or laminated, respectively, with wood fibers primarily oriented along the longitudinal axis of the member in accordance with ASTM D5456 and the in-plant manufacturing standard approved by APA. SCL is available in a variety of grades, thicknesses and depths.

3. Formaldehyde emission level:
   The G-5 rating is a formaldehyde emission level as defined in Table 1. SCL has been qualified for low formaldehyde emissions following the principles of ISO 12460-4 and AS/NZS 4357.4:2005, and the performance requirements of ASTM D5456. SCL products meeting the formaldehyde emission level specified in Table 1 in accordance with the APA Custom Product Specification E-720 are listed in Table 2.

   Table 1. Upper formaldehyde emission level for G-5 rating following the principles of ISO 12460-4 and AS/NZS 4357.4:2005(a)

   (a) SCL products are outside the scope or exempt from CARB ATCM for formaldehyde from composite wood products, EPA’s TSCA Title VI Standard for formaldehyde from composite wood, HUD regulation for formaldehyde, and CAN/CSA-O160 for formaldehyde from composite wood products. The tabulated formaldehyde emission level in the G-5 standard is more stringent than the E_0 of AS/NZS 4357.4:2005 and F*** of JAS Standard for Laminated Veneer Lumber, MAFF Notification 701.

4. Limitations:
   a) SCL shall be designed and installed in accordance with the applicable provisions of the code and the recommendations provided by the manufacturers.
   b) SCL trademarked in North America is limited to dry service conditions that result in the average moisture content of sawn lumber of less than 16 percent.
   c) SCL products are produced by the manufacturing facilities shown in Table 2 under a quality assurance program audited by APA in accordance with the APA Custom Product Specification E-720.
   d) This report is subject to re-examination in one year.
5. Identification:
SCL is identified by a label bearing the manufacturer’s name and/or trademark, the APA assigned plant number, the product type, the APA logo, means of identifying the date of manufacture, the product report number PR-E720, and the formaldehyde emission rating G-5.

*APA – The Engineered Wood Association* is an approved national standards developer accredited by American National Standards Institute (ANSI). APA publishes ANSI standards and Voluntary Product Standards for wood structural panels and engineered wood products. APA is an accredited certification body under ISO/IEC 17065 by Standards Council of Canada (SCC), an accredited inspection agency under ISO/IEC 17020 by International Code Council (ICC) International Accreditation Service (IAS), and an accredited testing organization under ISO/IEC 17025 by IAS. APA is also an approved Product Certification Agency, Testing Laboratory, Quality Assurance Entity, and Validation Entity by the State of Florida, and an approved testing laboratory by City of Los Angeles.
